

The series Horn-eT is the answer to electric transportation on the seas, lakes and rivers.

A series of professional boats ranging from 30 to 60 feet in length with electric or hybrid propulsion, equipped with an innovative hull design that reduces wave motion and improves navigation efficiency and generates no trails when operating at low speed. Respecting the environment, thanks to the "ZERO" emissions of the full-electric versions, limited pitch and roll to facilitate work at sea or simply for greater comfort on board. The Hull is constructed by CNC robot molding in vinyl ester with customisable layouts for both work-boats and passenger transportation.

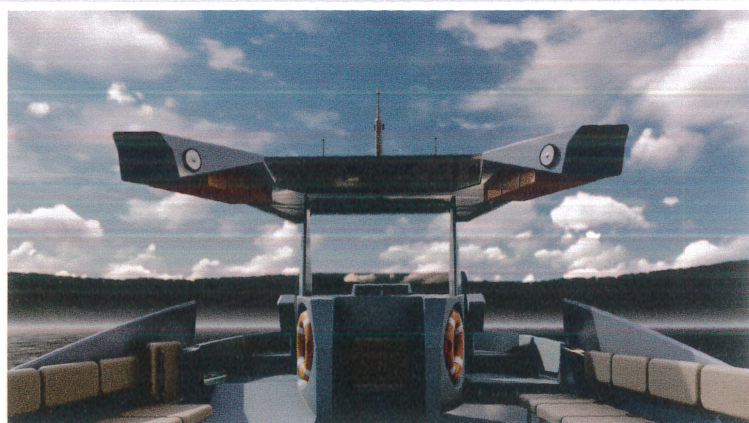

Transmission can be with conventional propellers or by water jet.

Available in two different versions of design, one of them including an access platform for persons with reduced mobility.

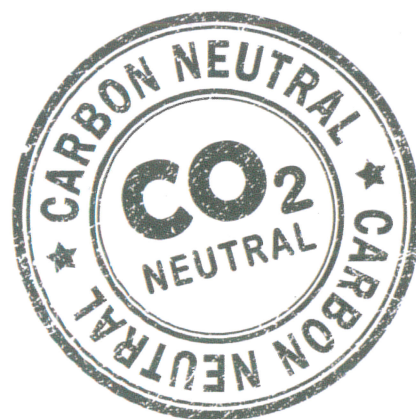

Technical Data:

	Horn-eT 30	Horn-eT 40	Horn-eT 60
Length f.t.	9500 mm (31')	12200 mm (40')	18300 mm (60')
Beam max.	3800 mm (12 1/2')	4000 mm (13')	7000 mm (23')
Draft	550 mm (21")	650 mm (25")	880 mm (35")
Water Tank	100 l.	300 l	700 l.
Battery Capacity	260 kWA	520 kWA	1040 kWA
Power (standard)	272 CV	544 CV	1360 CV
Autonomy	2,5 h/60% of full power	2,5 h/60% of full power	2,5 h/60% of full power

CE Certification
Class A/B/C
